

How VolTrim works, end to end

Read left to right. Every stage is read-only until the final approval gate.

Why it is built this way

Savings are measured from CloudTrail, so a deletion counts no matter who did it — console, Terraform, another tool or VolTrim itself.

Cost comes from the bill (CUR), not an estimate, so Finance can rely on it. Recommendations come from AWS Compute Optimizer rather than a home-grown engine. And because measuring never needs delete permission, the whole reporting capability stays safe by design.

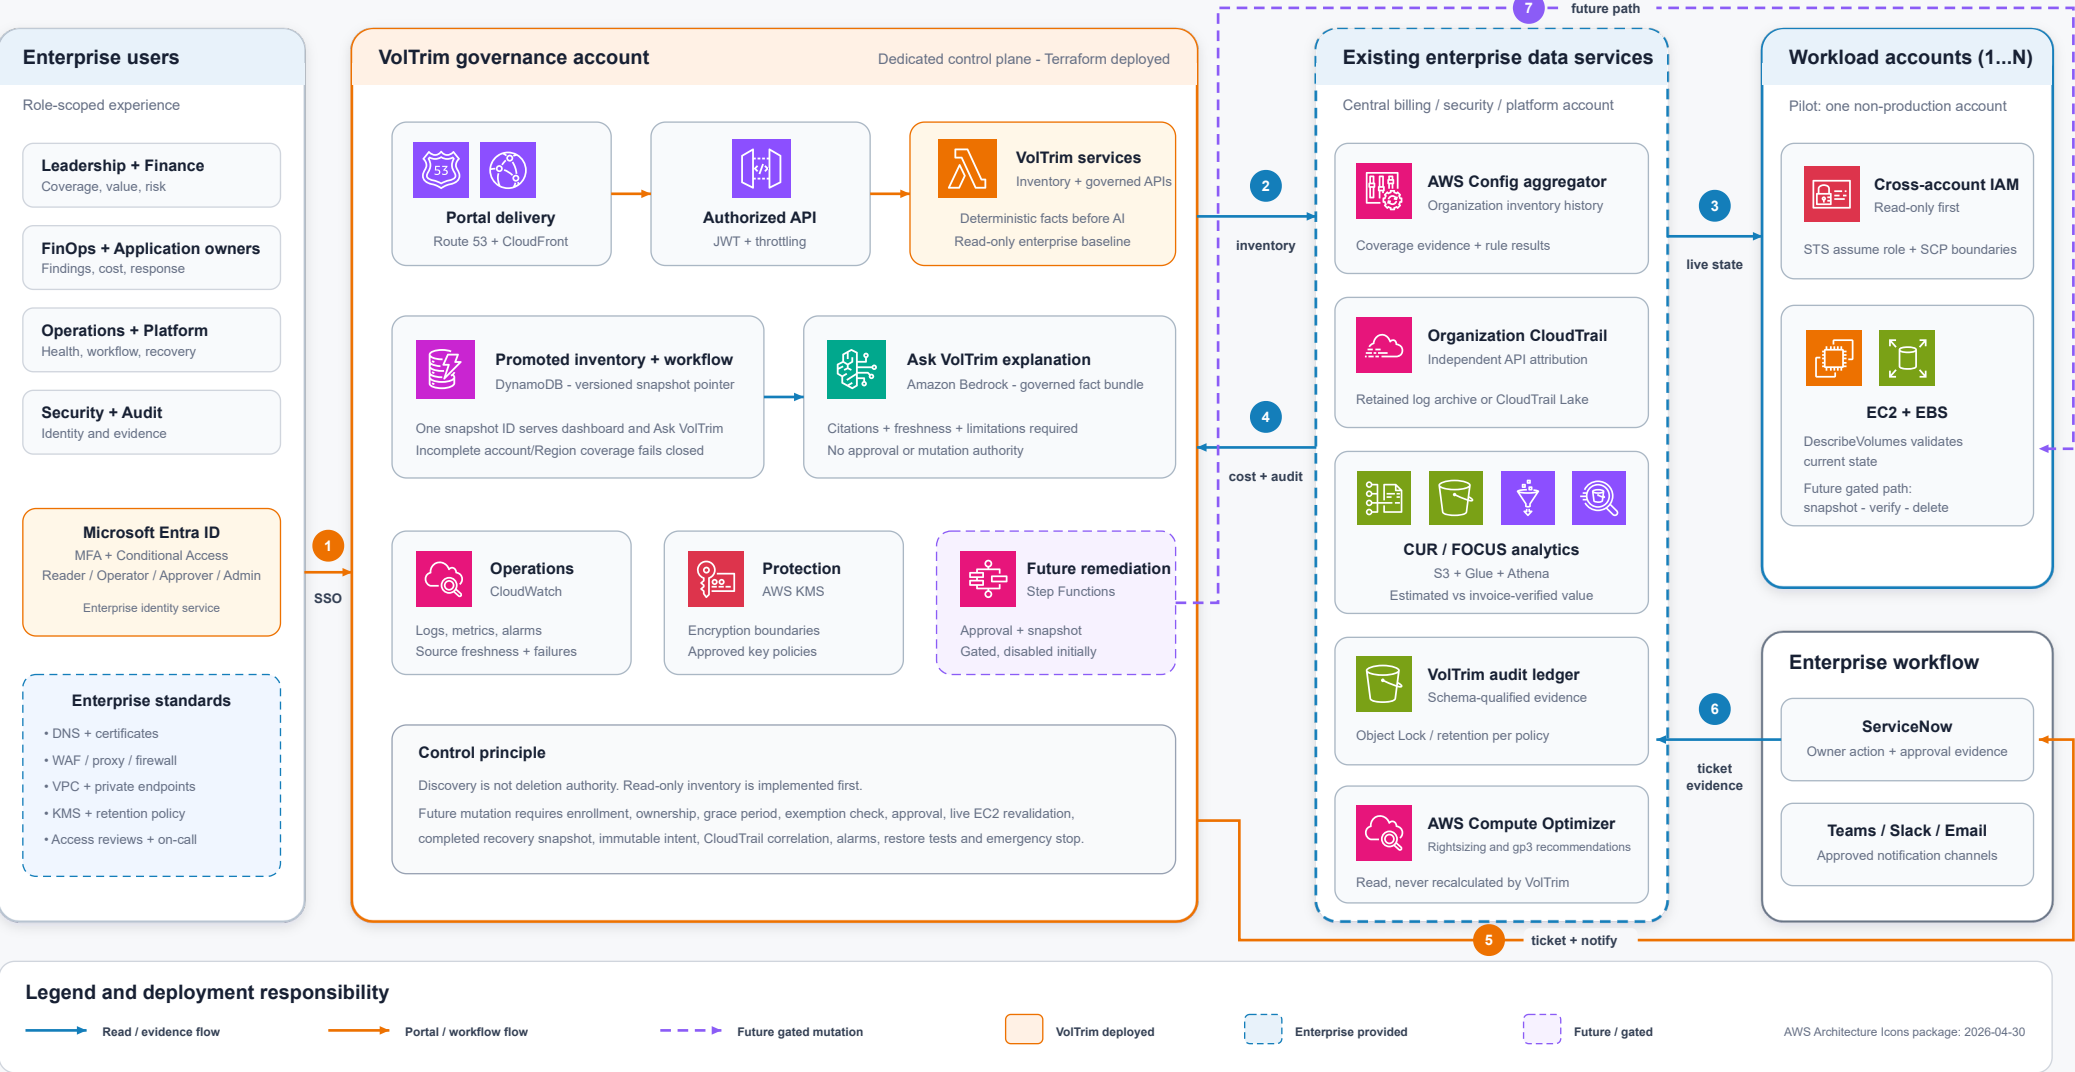

Demonstration uses synthetic data. Icons and service names indicate the intended AWS services in the target state.
